

# Asian Population At Greatest Risk for Undercount in New Jersey

In the 2010 Census, the Census Bureau determined that the Asian population was undercounted nationwide. The Census determines how billions of dollars in federal funds are distributed.

The Census has low response rates in some areas and among certain population groups such as Asian residents, who are at risk of being undercounted.

In New Jersey, **190,008** Asian people live in “hard-to-count” (HTC) areas where a low percentage of residents completed and returned their most recent census questionnaire. That comprises **21%** of the total Asian population in the state.

*This map shows the concentration of Asian populations living in “hard-to-count” (HTC) areas, meaning areas with the lowest rate of mailing back their Census forms.*
